M E D I C A L

about

At the inception of emergency care for medical teams from MHM, an obvious fracture was splinted in the best possible fashion, using ingenuity, determination and a lot of "guesswork" as to how the fracture could be approximated. Eventually an old bedside portable unit was donated and shipped, providing the beginnings of our radiology department. As the needs continued to grow, our radiology area was lead-lined, a second better portable unit was purchased and flat film digital radiology was begun at our hospital in 2015. Currently the hospital employs two radiology technicians, with a third on call.

future plans

As the world of imaging continues to evolve, updating both our radiation source and our digital capabilities becomes increasingly important. Our x-ray machines are aging as is our technology, making newer machines a more urgent need. Basic imaging services are not readily available in the areas near the hospital, so these services are invaluable to the community.
